

 **Grid-interactive Renewable Power During 2009-10**

About 2330 MW grid-interactive renewable energy has been achieved during 2009-10. This consists of 1565 MW of wind power, 305 MW of small hydro power (up to 25 MW), 295 MW of cogeneration-bagasse and 153 MW of biomass power (Agro residues).

Over 8 MW of solar power and 4.7 MW of waste to energy were also added during the year.

Following the targets achieved in 2009-10 the cumulative achievement in grid-interactive renewable energy was 16817 MW.
